Summary

Project development from scratch and improvement of existing solutions. Creation of high-loaded, fault-tolerant, horizontally scalable systems. Ready to take responsibility, requirement analysis, perform and delegate for improve performance. That motivates me are interesting tasks, studying new things, transparency, professional and tech-savvy team, freedom.

Tech skills

Category	List
Programming languages	PHP, Go, Python, JavaScript
Languages	English (pre-intermediate)
Storage	Postgresql, Redis, Memcached, Neo4j, MongoDB, MySQL
Web Servers	Nginx, Haproxy
Frameworks	Symfony 6/5/4, Flask, Yii2/1, Laravel
Version control system	Git, SVN
Message brokers	Rabbit MQ, Redis
Operating System	Ubuntu, CentOS, Windows, macOS
Test automation	PHPUnit, Puppeteer
Bug tracking, Code review system	Sentry, New Relic, Jira, GitLab, YouTrack
Continuous integration/inspection system	GitlabCI, GitHub Actions
Tools	IntelliJ IDEA, Docker
Other	Agile, GraphQL, Apollo Federation, Lua, http api, WebSocket, SocketIO, Horizontal scaling, Fault tolerance, Microservices, xDebug, Bash, Consul, Psyduck, JWT/OAuth2, Gunicorn, VK/FB.api, SSR (server side rendering), Apple Pay, Google Pay, Composer, Grunt, google/yandex/osm.map api, cUrl, Tor, Squirtle, PCRE, Soap, XML, SPL, SOLID/YAGNI/KISS, Google Analytics, Ya.Metrika, make documentation

Highlights

I was collecting information about business wishes and help to create solution whom help to earn more new huge clients. Helped to create project from the scratch was helping to earn more than 100000\$ in an MVP state in a short period (2 months). I was always completing projects until a stable state and build an environment to move it to the support process. Fast prototyping and release MVP for early test ideas in the real world. I am open to new pieces of knowledge. I do not afraid of projects with high complexity. I work as part of a team at different business types: B2C(DAU: 4000000, sinoptik.ua, orakul.com) B2B (contentinn.com service like airbnb.com, but for business), Internal solutions (extract and aggregate user behavior from thousands of sites).

Career

Company:	SocialTech
Duration:	October 2020 — Present days
Role:	Senior Developer
Achievement highlights:	Successfully migrated from monolith to independent microservices Decreased platform ongoing maintenance expenses in ten times Reduced the complexity of the system by an order of magnitude Integrate simple and strict, fault-tolerant event exchange system Migrate from undocumented http api to flexible and self documented federated graphql api
Company:	NDA
Duration:	November 2019 — June 2020
Role:	Architect/Senior PHP Backend/Dev/Ops
Projects:	Set of projects whom help to investors find good companies for make investments and help companies to meet right investors.
Responsibilities:	Identification of bottlenecks in software products and creating solutions to eliminate them. Speedup for: development process, entry threshold, implementation of new functions, software execution.
Company:	Together Networks
Duration:	August 2017 — June 2019
Role:	Senior PHP Backend/Architect/Dev/Ops
Projects:	Internal solution for extract and analyze data from many clients.
Responsibilities:	The full cycle of development. I start from high-level technical specification to full implementation, deploy to production and support. Powerful multi-layer ETL system with good data acquiring (3k rps) and large data storage.

Old experience

Amadeus IT Group	June 2016 — August 2017	Backend/DevOps/Frontend developer
Ukr.net	July 2013 — December 2016	PHP Developer
Freelance	August 2011 — July 2013	https://fl.ru/users/bpteam/

About me

Very nice and cheerful person if I got enough to sleep. The character is sociable. Married, have children. I do not smoke. I keep my hand on the pulse of new technologies and try them on to solve problems. Open to communication and always ready to discuss tasks with colleagues. I like to read or listen to fiction, watch movies and relax with my family and friends.

Wishes

I am looking for the creation of high-loaded, fault-tolerant, horizontally scalable systems with a tech-savvy team.
